The paper in the bottom of the drawer, probably supplied with the cabinet.

And what is on the back:

 SIZES {  
 For All Makes  
 16 SIZE {  
 PRICE  
 \$1.65 per dozen  
 \$18.50 per gross  
 in regular box  
 When 3 dozen or more  
 ordered they are to be  
 had at the gross price.

Here is the double lentile "at  
 the outer edge, where it "lets the  
 hands pass freely" without using  
 any higher glass.

REGULAR LENTILE

Where the hands rub on  
 the ordinary glass. The  
 kind that gives trouble and should  
 never be used on any men's thin  
 pocket watch model, strap or ladies'  
 wrist watches.

The Quality and Perfect Fit of the Watch Crystal is Important

A GREAT many people seem to think that a watch glass is a transparent substance covering the dial of their watch and they let it go at that. So isn't it only natural then for people to think that all watch glasses are all alike—that they want them as cheap as can be secured in most instances. We believe that this can be corrected if people are rightly informed that there is a difference.

Why Gruen Watch Crystals Are Better

Like many other things, there are great differences in the quality of watch crystals and as is usually the case, the best is the cheapest in the end. The cheap watch glass is a poor investment at any price. If it does not fit perfectly, too much moisture and dirt gets onto the movement and impairs its timekeeping performance. If the glass from which the crystal is made is not of the highest quality, besides distorting figures, it makes the watch dial dull looking instead of bringing out its brilliance. If the curvature of the crystal is not correctly and specially designed for the watch hands and dial, the minute hand may touch the crystal somewhere and interfere with the performance of the watch. A poorly fitting glass is also easily broken and chipped on the edge.

Watch crystals are as comparable in quality as the very cases for which they are intended.

Advantages of Gruen Quality Crystals

A good watch crystal should be as carefully designed and made as a good pair of lens for eye-glasses. If ten-cent store spectacles are not good enough for the eyes, cheap glasses are not good enough for a good watch.

Gruen crystals cost a little more than the ordinary glasses made from broken tumbler glass, etc., but cost less than any crystal of similar quality.

Standardized Gruen Odd Shape Crystals for Gruen Cases

The Gruen has a patented process for making beads on cases, without any solder or heat being used. One bead after another is struck up cold to avoid going through the fire. They cannot warp. They cannot be warped by force. In the last operation the bead is run through a steel gauging die that brings out the proper size in one exactly with a proper bead in the snap to hold Gruen crystals firmly with a close fit at all points.

Every Gruen watch crystal is specially designed and carefully made to fit a particular watch. The "Gruen red label, double lentile," originally designed by Gruen, absolutely eliminates any possible friction between the glass and the minute hand.

Gruen crystals are made of the finest quality crystal glass, absolutely clear and colorless, bringing out with utmost brilliancy the hands, numerals, and dial. Gruen crystals, whether in round or odd shapes, fit the watch bead exactly at every point.

The edges of Gruen crystals are absolutely smooth, polished, and true. Each one is tested for its accuracy as to size, edge, height, flat unwarped edge, and achromatic qualities.

For a perfect fit which holds the crystal tightly in place, fits in the curves, the utmost protection from dust, sharp, clear brilliancy and freedom from every kind of crystal trouble, use Gruen watch crystals. They make satisfied customers.
