Model Name: Strap 809

Type: Wristwatch

Period/date: 1950's

Gender: Men's

Case Maker: Gruen USA

Case Material: Guildite

Case Serial: F10468

Case Style Number: 829

Caliber: 415SS

Movement Maker: Gruen Switzerland

Movement Serial: I don't know

Other info: Military Style

I can find watches from this era with these hour and minute hands, but not this seconds hand.
Any info you can provide will be appreciated.

Dall

I think that neither hand is original to this watch.
The form of minute and hour hand is OK, but there should not be golden hands to a stainless steel case. And I fully agree with you that the second hand is absolutely unusual to this watch. I have never seen such a second hand on a Gruen watch.
The caliber 415 was introduced 1950, the sweep second version possibly even later. It is impossible that the watch is from 1944, much more likely from 1952 / 1953.
I would say this is (or has originally been) a Strap 809, which was introduced 1953 and sold under the model name "Sea Worthy". It did cost \$49.50 and was to my knowledge at that time the only non automatic sweep second model in Guildite case beside the "Sea Farer" which might have been the same watch with a different band and dial.

Most of the time these were blue steel hands.....methinks!

I just purchased the same watch (unfortunately missing the back mounting ring).
The style number needs correction, it is style 829, not 529.
This can also be seen in the picture.

Almost certainly 1953. During 1953, Gruen stopped putting serial numbers on the movements.
This case # is Gruen house line F10468. I've catalogued a 460-825 with Gruen house case #

F003569, movement serial # 1L 76242.

BTW, can anyone confirm my suspicion that this is a Swiss-made case? Although unmarked, the printing & layout match the Swiss cases produced for the European market.

Yes, 1953 is what I also anticipated. BTW, my case has serial F73076.

As this watch is listed in the Strap section and not in the Import section of the Master Book as most of the other Guildite cases of that time I would also assume this being really a US made case. The import cases I have seen all said SWITZERLAND inside.

There seem to have been two internal Fxxxx sequences, one in 1953 and one in 1957/58. Style numbers involved in the second run are from about 966 to (1)035, movements used in my Fxxxx watches are 215, 215RSS, 220, 415, 422RSS, 550SS.

Are you sure with the F003569 serial? Seems to be one digit too much...

The 1L movements seem to be odd. I own three which are two 460SS and one 462. I would have dated the watches towards about 1950, but if 1L would succeed 1K they would have to be at least from 1955...

And: I do not think that the Import watches were produced for the European market. Gruen did really not actively sell any of these here. It looks like these watches were imported to the US completely cased for certain reasons.

The watches to be sold in Europe had the Gruen Geneve brand at the dial, this started mid 50s. After 1957 some of these models have also been imported to the US, most famous model is the Airflight or Super-G.

I agree, overwhelmingly. But I have seen some early Imports with the German crown hallmark. But these examples may have been related to the Alpina partnership, even though not marked Alpina-Gruen. Some Alpina-Gruen and regular Gruen Import models shared cases, and not all cases used on watches sold as Alpina-Gruen were marked Alpina-Gruen. So, it gets confusing, and I wouldn't rule out the possibility that Alpina may have distributed at least some watches branded solely as Gruen.

But yes, I agree the Import line's primary function was to import complete watches to the US, not

for European distribution.

I'll check & confirm. It's just very strange--only cases made by outside companies were marked "cased & timed... by Gruen Watch Co." True Gruen house-made cases always say "...by the Gruen Watch Co."

BTW, regarding style #s, I think with more data we'll find the style numbers you referenced as 1957 are actually 1953, as well.

For example, I have in my collection a Norwood-made 21J 235 (aka 2351), style pair 235-911, produced 1952-53 (Gruen house case # D471268). Here's a pic of that one. Note the SN is 1 letter + 6 numbers here, and you can see "THE Gruen Watch Co." Maybe this also addresses your question about the previous case # reference being too short, but I'll check anyway.

Found the case in question: 460SS-825, case # F003569. Although it follows the Gruen house numbers, it was made for Gruen by Id watch case company.

Based on the closure ring, as well as the interior fonts and lack of "The Gruen Watch" I'd say the above case is also an Id watch case. Perhaps Gruen sourced all their Stainless cases vs. producing them in house.

I also looked back at the Swiss made cases from this time: they follow the same Gruen house number progression, but they put the letter at the end of the 5-6 digits vs. in front (pic at bottom). They also had a different style closure ring.

Swiss Guildite case # from this time:

The Id-Logo is a nice hint, I do not have this one mine. I have several examples of Id-cases from the later period, but nothing yet that early.

This also explains the two different series starting with "F", this first seems to be the 1953(+) one from ID, the second 1956+ run should be in house.

Not all import cases from Switzerland have a letter at the end, some (early Weber cases I guess) are numbers only. But definitely all later imports from the 50s did have the letter at the end. It is possible that it is a year indicator. I have observed B,D,E and F so far at my Imports. Any other letters from other forum members?

Possibly A=1950, B=1951, C=1952, D=1954, E=1955, F=1956,.... but this is pure speculation. Though it seems to match not too bad...

Barney Green wrote on Wed, 28 August 2019 14:49: It is possible that it is a year indicator. You may well be right that it's a year indicator. I found Gruen-made case # C454xxx engraved with a name & "12/25/1951", so C began sometime in/before 1951. Beyond that...??

Hoping others can shed more light on 50s case letters & dates!

The C at the start is a different in house series and should not have anything to do with the last letter of the imports.
The Cxxxxxx series coincidentally starts about early 1951 or may be very late 1950 but it definitely lasts until late 1953. So this clearly is not a year indicator but a consecutive prefix which started with B most likely in 1947.
My statement that it could be a year indicator purely relates to the last letter of the import cases.

Sorry for confusion. I put too many things into one post. Here as single statements:
1.) A to F in the end with import cases: probably year indicators.
2.) F in the beginning as designator for ID case factory dating probably 1953+
3.) F in the beginning with in house cases succeeding B,C and D series dating 1956+

Yes, finally got it, thank you. To your question, then, about additional Swiss letters: here is "G."

This time it's in front of the digits -- part of the "fixed" stamp -- on a 365SS case.

Others may have more.

Hmm, one of the very last imports, "Import 320". The last one is Import 326 which should be late 1957 or early 1958. So "G" could well be 1957. Why in front? Probably because it was already part of the tooling with the GRUEN logo as one can see. And the serial number was stamped in later during production. Definitely interesting, the first "G" I have seen up to now with an import.

After 1957 some of these models have also been imported to the US, most famous model is the Airflight or Super-G. Another way of identifying whether a watch was destined for the European market is the fact that there is no GXC code on the movement. I have observed that with many of the Gruen Geneva branded models including my own Super-G that I recently posted.

Obviously this is not entirely reliable as many cases don't have their original movement anymore.
