Restoring an early 21j Verithin VE 17L Gruen Madretsch, need a balance staff. This one was made in late 1907, believe I have seen others call these models "Gen 1.5" verithins. It has the roller plate & jewel integral to the balance spoke. Tried a V1 staff but doesn't match. Any advice or leads appreciated!

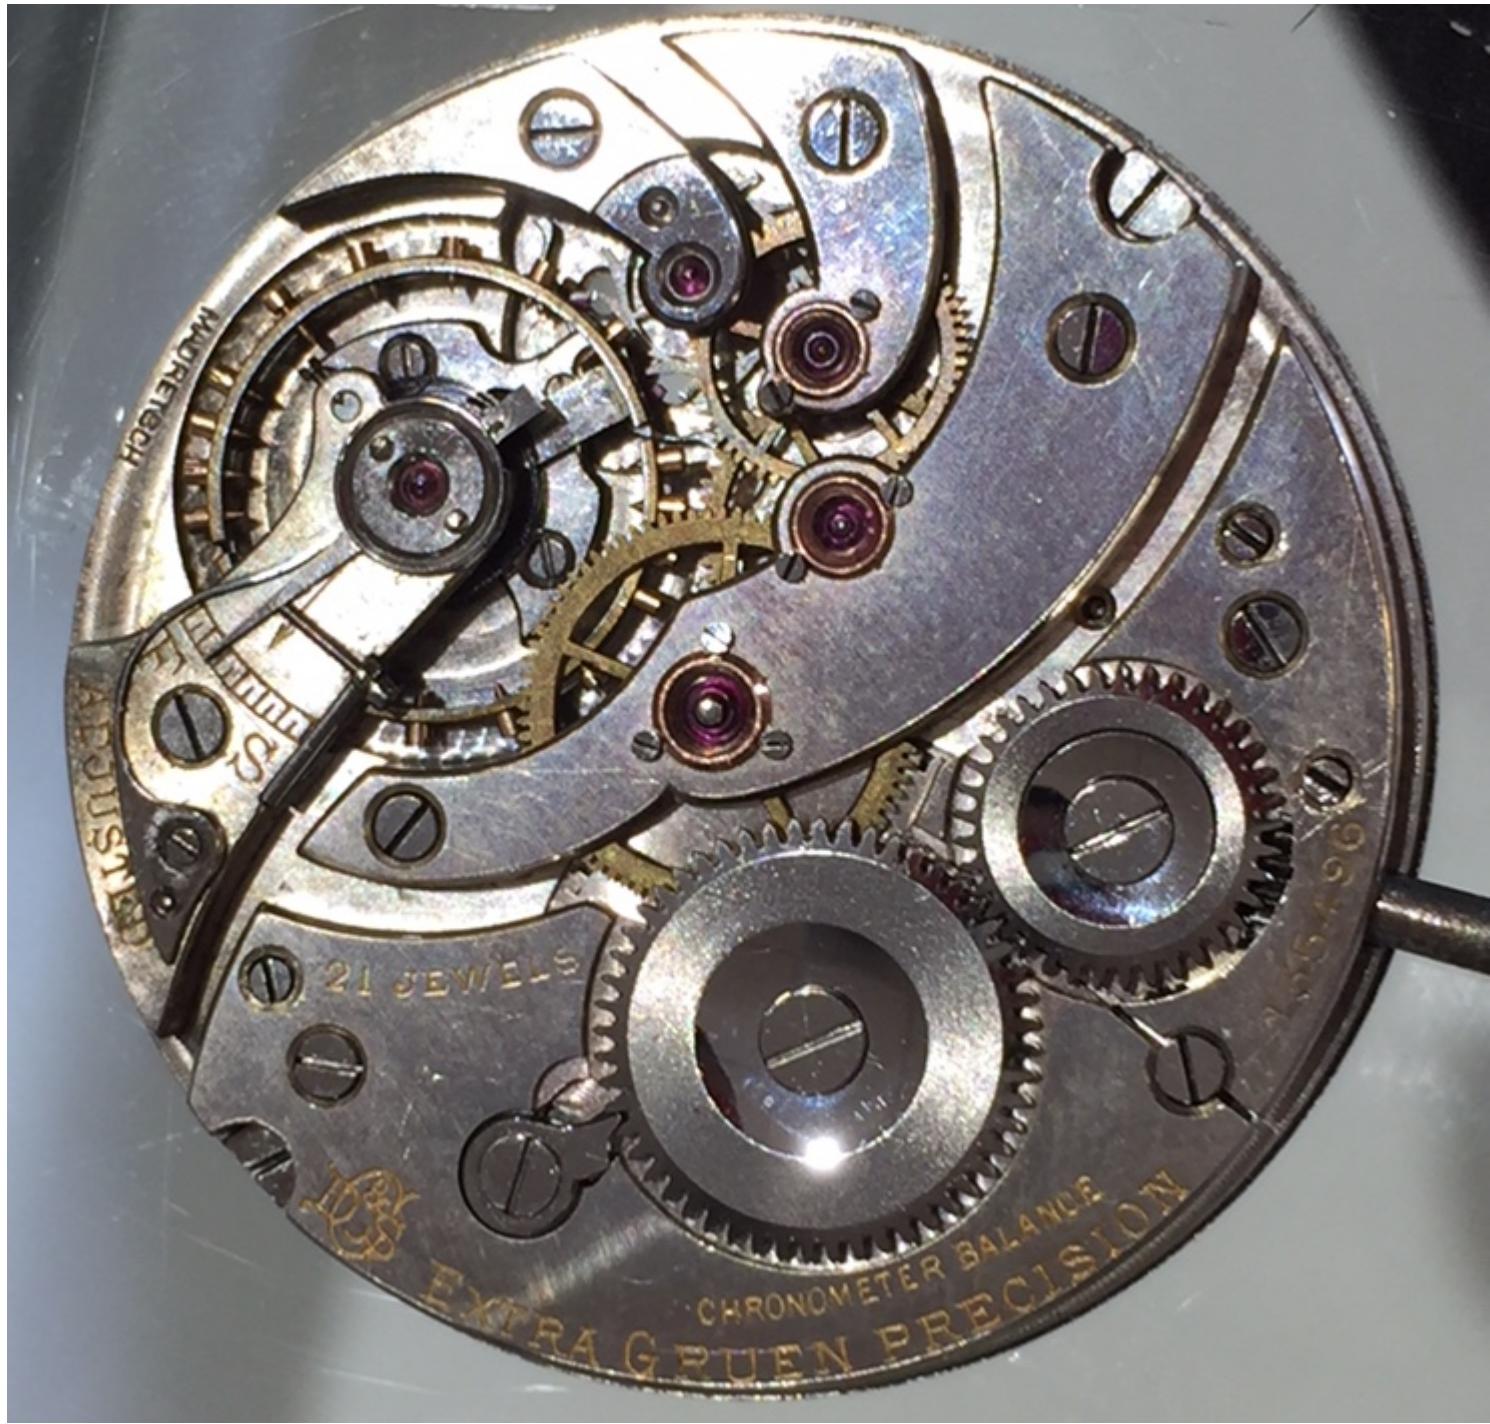

Dan

What does your "V1" staff look like? Specifically, is it smoothly cylindrical, or does it have a pronounced step in it?

I ask because I have seen both types labeled (in Gruen factory packaging) as "V1". I assume that the smooth type is the correct staff as the other type is very close (or identical?) to the V4 staff.

Thanks for the reply, and you're right: the correct one would be the smoothly cylindrical one. The one I'd sourced previously was one with a shoulder.

Found an orphaned V4 ca1915-16. Different balance/pallet vs. 1920s V4 I have. Looks close to my 21j down to the pallet bridge, which is rounded on the ends vs pointed. We'll see.

If you find that that fits, could you let us know? V1 staffs are unobtanium, but early V4 movements are cheap!

I looked at my parts drawers and have V4s and V7 staffs but nothing marked V1. However, I do have the attached for a Precision Ultra Very Thin 17J. I don't think that it is right, but I offer it up for consideration.

That one looks like the one I tried previously, and from the 1925 date on the assortment it's likely for the newer version current at that time.

Taking the donor in for exploratory surgery tomorrow. Fingers crossed! I have a 19j Madrestch as a last resort, but scavenging that would kill me.

I have a 17j Madretsche donor that I could spare. I feel your pain...

This story is just too true to be good. Not a match; on to plan C. BTW, the only visual indicator from the top side on the stud carrier is the hole: the Madretsche has a perfectly round hole for the hairspring, while the later (non-matching) movement has semi-circle with one flat side. Difference is visible in images above.

Here's a visual of the broken staff.

Also, thinking longer term of getting this into a CAD file and finding a CM. Such a simple design. Any recos?

Update on this: I took a Madrestch 19J movement of same design & likely within same year production (sn 130k vs the 135k 21j VE). No dice.

Escapement is identical, but 19j has a standard roller table, so takes the same broad collar v1-V4 staff discussed above. So need to have staff made.

Btw, this staff looks just like a pallet arbor. Can't help thinking that would be much easier to find. Anyone know a way of checking if there's a pallet arbor available that would fit? Tried several websites, but couldn't find a way to search dimensions.
